

Firm: Butler, Fairman & Seufert, Inc.
Project: U.S. 40 Pedestrian Bridge Over White Lick Creek
Owner: Town of Plainfield

The U.S. 40 Pedestrian Bridge over White Lick Creek is envisioned as a signature structure for the Town of Plainfield's trail system. It provides a link from downtown to the Greenways Trail and the future sports complex on the west side of White Lick Creek.

The structure consists of two pair of circular pylons, tilted in two directions and connected to a large plate or medallion at their apex, resembling an A-frame when viewed head-on or from the side. The medallion functions as a connection plate for the four pylons and provides support for the center spans of the pedestrian bridge through 2 ½ inch diameter hanger rod attachments. The cast steel medallion at the apex of the bridge blends old and new with the Old National Highway emblem and the Plainfield "P" logo. This bridge show Plainfield's commitment to its trails and making their community a better place to raise a family and to live.
